## EXPLANATORY NOTE

Attached hereto and incorporated by reference herein is the press release issued by Vascular Biogenics Ltd (the “Company”) on May 14, 2020, announcing financial results for the first quarter ended March 31, 2020, unaudited condensed interim financial statements as of March 31, 2020 and for the three months ended March 31, 2020 and 2019 and operating and financial review for the first quarter ended March 31, 2020. This Report of Foreign Private Issuer on Form 6-K shall be incorporated by reference into the Company’s registration statement on Form F-3 (File No. 333-207250 and 333-222138), filed with the Securities and Exchange Commission (the “SEC”) on October 2, 2015 and December 18, 2017, to the extent not superseded by information subsequently filed or furnished (to the extent the Company expressly states that it incorporates such furnished information by reference) by the Company under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended.

**SIGNATURE**

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

## VBL Therapeutics Announces First Quarter 2020 Financial Results and Provides Corporate Update

*Conference Call and Webcast at 8:30am Eastern Time Today*

**TEL AVIV, ISRAEL, May 14, 2020** — VBL Therapeutics (Nasdaq: VBLT) today announced financial results for the first quarter ended March 31, 2020, and provided a corporate update.

“We reached an important milestone in our development of VB-111 in ovarian cancer with the recent positive outcome of the interim analysis of the ongoing Phase 3 OVAL study, which demonstrated the potential benefit of VB-111 over standard-of-care in a randomized-controlled study,” said Dror Harats, M.D., Chief Executive Officer of VBL Therapeutics. “A second planned interim analysis which will assess overall survival in the two treatment arms, is expected in the third quarter this year. We are pleased to be making progress also in our MOSPD2 antibody programs. We recently presented promising new data in NASH and colitis models in a Poster of Distinction at Digestive Disease Week, and also published a peer review manuscript on the potential of MOSPD2 antibodies to treat multiple sclerosis (MS). New data on our MOSPD2 bi-specific antibodies will be presented in a late breaking session at the upcoming American Association for Cancer Research (AACR) annual meeting in June. Based on these positive developments, we successfully raised additional \$18.1 million in gross proceeds, in spite of the COVID-19 pandemic complexities. Our current cash position is expected to fund our operations into the third quarter of 2022”.

### **First Quarter and Key Corporate Highlights:**

#### **VB-111:**

- The independent Data Safety Monitoring Committee (DSMC) reviewed un-blinded data from the ongoing OVAL study in ovarian cancer and determined that the study has met the interim pre-specified criterion, of an absolute percentage advantage of 10% or higher in CA-125 response in the VB-111 treated arm compared to control. The DSMC recommended that the study proceed without modification.
- The overall CA-125 response rate in the first 60 randomized evaluable patients is 53%. Assuming a balanced randomization, the response rate in the treatment arm (VB-111 in addition to weekly paclitaxel) is 58% or higher. In patients who had post-dosing fever, which is a marker for VB-111 treatment, the response rate is 69%.
- The CA-125 response rate observed in the Phase 3 interim analysis is at least as good as the response rate seen in Phase 2, which enrolled similar population of patients with platinum-resistant ovarian cancer. The results will be presented at ASCO20 Virtual Scientific Program.
- The OVAL interim analysis results were discussed by Dr. Bradley J. Monk of Arizona Oncology on a KOL call hosted by the Company on March 26.
- NanoCarrier Co., Ltd., the Japanese licensee for VB-111, announced its intention to extend the ongoing global Phase 3 OVAL clinical trial in ovarian cancer to patients in Japan.
- The Israel Innovation Authority (IIA) awarded a non-dilutive grant of up to 3.175 million New Israeli Shekels (NIS) (approximately \$0.9 million) to fund development of VB-111.
- The planned studies of VB-111 in metastatic colorectal cancer and GBM are expected to start patient recruitment as soon as the COVID-19 situation allows.

#### **MOSPD2:**

- Published a new peer review manuscript demonstrating the potential of MOSPD2 antibodies for multiple sclerosis (MS).
  - VBL's data offer a differentiated approach to potential treatment of relapsing as well as progressive MS disease
- New preclinical data on MOSPD2 antibodies for treatment of NASH and colitis were presented at Digestive Disease Week (DDW).
  - Data demonstrate the potential of VBL's proprietary MOSPD2 mAbs for chronic inflammatory indications, via a novel and distinct mechanism targeting monocyte migration
  - The study was rated in the top 10% of all abstracts in this category and was selected as Poster of Distinction

#### **VB-201:**

- A milestone event was reached under VBL's collaborative agreement with a world-leading European animal health company, evaluating use of VB-201 for veterinary applications.

## Quarter Ended March 31, 2020 Financial Results:

- **Cash Position:** At March 31, 2020, VBL had cash, cash equivalents, short-term bank deposits and restricted bank deposits totaling \$31.6 million and working capital of \$24.6 million. VBL expects that its cash and cash equivalents and short-term bank deposits with the addition approximately \$16.7 million from the net proceeds of the Registered Direct Offerings of which we have announced on May 7, 2020 and on May 11, 2020, will be sufficient to fund operating expenses and capital expenditure requirements into the third quarter of 2022.
- **Revenues:** Revenues for the three-month period ended March 31, 2020 were \$366 thousand, compared to \$219 thousand in the same period of 2019.
- **R&D Expenses:** Research and development expenses, net, after government grants, in the three-month period ended March 31, 2020, were \$4.8 million, compared to \$3.3 million in the same period in 2019.
- **G&A Expenses:** General, administrative and marketing expenses for the three-month period ended March 31, 2020, were \$1.2 million, compared to the \$1.3 million in the same period in 2019.
- **Comprehensive Loss:** VBL reported a net loss for three-month period ended March 31, 2020 of \$5.4 million, or (\$0.15) per diluted share, compared to a net loss of \$4.2 million, or (\$0.12) per diluted share, in the same period of 2019.

For further details on VBL's financials, please refer to Form 6-k filed with the SEC.

## About VBL

Vascular Biogenics Ltd., operating as VBL Therapeutics, is a clinical stage biopharmaceutical company focused on the discovery, development and commercialization of first-in-class treatments for areas of unmet need in cancer and immune/inflammatory indications.

## Forward Looking Statements

This press release contains forward-looking statements. All statements other than statements of historical fact are forward-looking statements, which are often indicated by terms such as “anticipate,” “believe,” “could,” “estimate,” “expect,” “goal,” “intend,” “look forward to,” “may,” “plan,” “potential,” “predict,” “project,” “should,” “will,” “would” and similar expressions. These forward-looking statements may include, but are not limited to, statements regarding our programs, including VB-111, VB-600, including their clinical development, therapeutic potential, the impact of the COVID-19 pandemic on our business, operations, clinical trials, supply chain, strategy, goals and anticipated timelines and clinical results. These forward-looking statements are not promises or guarantees and involve substantial risks and uncertainties. Among the factors that could cause actual results to differ materially from those described or projected herein include market and other conditions, uncertainties associated generally with research and development, clinical trials and related regulatory reviews and approvals, the risk that historical clinical trial results may not be predictive of future trial results, that our financial resources do not last for as long as anticipated, and that we may not realize the expected benefits of our intellectual property protection. In particular, the DSMC recommendation that the OVAL trial proceed is not assurance that the trial will meet its primary endpoint of overall survival once completed. A further list and description of these risks, uncertainties and other risks can be found in our regulatory filings with the U.S. Securities and Exchange Commission, including in our annual report on Form 20-F for the year ended December 31, 2019, and subsequent filings with the SEC. Existing and prospective investors are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. VBL Therapeutics undertakes no obligation to update or revise the information contained in this press release, whether as a result of new information, future events or circumstances or otherwise, except as required by law.

## VASCULAR BIOGENICS LTD.

### NOTES TO CONDENSED INTERIM FINANCIAL STATEMENTS

(UNAUDITED)

#### NOTE 1 - GENERAL

Vascular Biogenics Ltd. (the “Company” or VBL) was incorporated on January 27, 2000. The Company is a late-stage clinical biopharmaceutical company focused on the discovery, development and commercialization of first-in-class treatments for cancer and immune/inflammatory indications. VB-111 (ofranergene obadenovec), a Phase 3 drug candidate, is the lead product candidate in the Company’s cancer program.

VB-600 series are preclinical stage antibodies targeting MOSPD2 for inflammatory and oncology indications, which are being advanced towards IND. VB-601 is the lead mAb candidate for various inflammatory indications and VB-611 is the lead bi-specific mAb for various solid tumors.

VB-201, a Phase 2-ready drug candidate, is the Company’s lead Lecinioxid-based product candidate for chronic immune-related indications.

The Company is engaged in an exclusive license agreement with NanoCarrier Co., Ltd. for the development, commercialization, and supply of ofranergene obadenovec (“VB-111”) in Japan for all indications.

In March 2019, the Company entered into an exclusive option license agreement with an animal health company for the development of VB-201 for veterinary use, see note 7.

On March 26, 2020, the Company announced positive outcome of the first interim analysis in the OVAL Phase 3 Ovarian Cancer Pivotal Study.

Since its inception, the Company has incurred significant losses, and it expects to continue to incur significant expenses and losses for at least the next several years. As of March 31, 2020, the Company had an accumulated deficit of \$213.5 million. The Company’s losses may fluctuate significantly from quarter to quarter and year to year, depending on the timing of its clinical trials, the receipt of payments under any future collaboration agreements it may enter into, and its expenditures on other research and development activities.

As of March 31, 2020, the Company had cash, cash equivalents, short-term bank deposits and restricted bank deposits of \$31.6 million. The Company may seek to raise more capital to pursue additional activities. The Company may seek these funds through a combination of private and public equity offerings, government grants, strategic collaborations and licensing arrangements. Additional financing may not be available when the Company needs it or may not be available on terms that are favorable to the Company.

#### NOTE 2 - BASIS OF PREPARATION

The Company’s condensed interim financial statements as of March 31, 2020 and for the three months then ended (the “condensed interim financial statements”) have been prepared in accordance with International Accounting Standard No. 34, “Interim Financial Reporting” (“IAS 34”). These condensed interim financial statements, which are unaudited, do not include all disclosures necessary for a complete presentation of the Company’s financial position, results of operations, and cash flows, in conformity with generally accepted accounting principles. The condensed interim financial statements should be read in conjunction with the Company’s annual financial statements as of December 31, 2019 and for the year then ended, along with the accompanying notes, which have been prepared in accordance with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board (“IASB”). The results of operations for the three months ended March 31, 2020 are not necessarily indicative of the results that may be expected for the entire fiscal year or for any other interim period.

#### NOTE 3 - SIGNIFICANT ACCOUNTING POLICIES

The accounting policies and calculation methods applied in the preparation of the interim financial statements are consistent with those applied in the preparation of the annual financial statements as of December 31, 2019 and for the year then ended.

**NOTE 4 - FINANCIAL RISK MANAGEMENT AND FINANCIAL INSTRUMENTS**

The Company's activities expose it to a variety of financial risks: market risk (including currency risk, fair value interest rate risk, cash flow interest rate risk and price risk), credit risk and liquidity risk. The interim financial statements do not include all financial risk management information and disclosures required in the annual financial statements; therefore, they should be read in conjunction with the Company's annual financial statements as of December 31, 2019. There have been no significant changes in the risk management policies since the year end.

**NOTE 5 - CASH AND CASH EQUIVALENTS, SHORT-TERM BANK DEPOSITS AND RESTRICTED BANK DEPOSITS**

Cash and cash equivalents, short-term bank deposits and restricted bank deposits as of March 31, 2020 were \$12.9 million, \$18.2 million and \$0.5 million. The short-term bank deposits as of March 31, 2020 were for terms of three to twelve months and carried interest at annual rates of 1.49%-2.15%.

**NOTE 6 - SHAREHOLDERS' EQUITY**

- a. During the three months ended March 31, 2020, the Company sold an aggregate of 483,930 ordinary shares under its at-the-market equity facility. The total consideration amounted to \$497 thousand, net of issuance costs.
- b. On January 6, 2020, 2,952,381 short-term warrants related to June 25, 2018 registered direct offering with a value of \$1.8 million were expired.
- c. In March 2020, the board of directors ratified the increase of the free pool available for the issuance under the 2014 ESOP plan to 1,976,441 ordinary shares.

**NOTE 7 - REVENUE**

The revenues recognized for the period comprise revenues from the exclusive license agreement for the development, commercialization, and supply of VB-111 in Japan for all indications and from the option to license agreement for the development of VB-201 for animal healthcare worldwide. The revenues are recognized according to IFRS 15 "Revenue from contract with customers."

Under IFRS 15, the consideration that the Company would be entitled to upon the achievement of contractual milestones, which are contingent upon the occurrence of future events of development progress, are a form of variable consideration.

**NOTE 8 - SUBSEQUENT EVENTS**

On May 7, 2020 and on May 11, 2020, the Company entered into Securities Purchase Agreements with several institutional investors and existing shareholders, pursuant to which the Company agreed to issue and sell, in a registered direct offering, an aggregate of 11,492,065 ordinary shares together with accompanying warrants to purchase an aggregate of 11,492,065 ordinary shares at a combined offering price of \$1.575 per share and accompanying warrant. The net proceeds from these offerings, which closed on May 11, 2020 and on May 13, 2020, respectively were approximately \$16.7 million after deducting the placement agent fees and commissions and offering expenses payable by the Company.

## OPERATING AND FINANCIAL REVIEW

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with the Company's annual financial statements as of and for the year ended December 31, 2019 (included in our Annual Report of Foreign Private Issuer on Form 20-F for the year ended December 31, 2019) and their accompanying notes and the related notes and the other financial information included elsewhere in this Form 6-K. This discussion contains forward-looking statements that involve risks, uncertainties and assumptions. Our actual results may differ materially from those anticipated in these forward-looking statements as a result of various factors. Our audited financial statements as of and for the year ended December 31, 2019 have been prepared in accordance with IFRS, as issued by the IASB and our unaudited financial statements for the three months ended on March 31, 2020 (the "Period") have been prepared in accordance with International Accounting Standard No. 34, "Interim Financial Reporting" ("IAS 34"). Unless stated otherwise, comparisons included herein are made to the three months period ended on March 31, 2020 (the "Parallel Period").

### Overview

We are a clinical-stage biopharmaceutical company focused on the discovery, development and commercialization of first-in-class treatments for areas of unmet need in cancer and immune/inflammatory indications. We have developed three platform technologies: a gene-therapy based technology for targeting newly formed blood vessels with focus on cancer, an antibody-based technology targeting MOSPD2 for immuno-oncology and anti-inflammatory applications, and the Lecinoxoids, a family of small-molecules for immune-related indications.

Our main program in oncology is based on our proprietary Vascular Targeting System, or VTS, platform technology, which we believe will allow us to develop product candidates for multiple oncology indications. The VTS technology utilizes genetically targeted therapy to destroy newly formed, or angiogenic, blood vessels. By utilizing a viral vector as a delivery mechanism, the VTS platform can also lead to induction or enhancement of a localized anti-tumor immune response, thereby turning immunologically 'cold' tumors 'hot'.

Our lead product candidate, VB-111 (ofranergene obadenovec), is a gene-based biologic that we are developing for solid tumor indications, and which we have advanced to programs for recurrent glioblastoma, or rGBM, an aggressive form of brain cancer, ovarian cancer and thyroid cancer. We have obtained fast track designation for VB-111 in the United States for prolongation of survival in patients with glioblastoma that has recurred following treatment with standard chemotherapy and radiation. We have also received orphan drug designation for GBM in both the United States and Europe. VB-111 has also received an orphan designation for the treatment of ovarian cancer by the European Commission.

In March 2020, we announced an encouraging outcome of the planned interim analysis in the OVAL study, a double-blind controlled Phase 3 potential-registration study in patients with platinum-resistant ovarian cancer. The OVAL independent Data Safety Monitoring Committee (DSMC), reviewed unblinded data and assessed CA-125 response, measured according to the GCIG criteria, in the first 60 enrolled subjects evaluable for CA-125 analysis. The DSMC confirmed that the study met the interim pre-specified efficacy criterion, of an absolute percentage advantage of 10% or higher CA-125 response rate for the VB-111 treatment arm, and recommended the study continue. The overall CA-125 response rate in the first 60 randomized evaluable patients was 53%. Assuming a balanced randomization, the response rate in the treatment arm (VB-111 in addition to weekly paclitaxel) was 58% or higher. In patients who had post-dosing fever, which is a marker for VB-111 treatment, the response rate was 69%. The primary endpoint of the OVAL Phase 3 study is overall survival, which currently approved therapies for platinum-resistant ovarian cancer have thus far failed to demonstrate. A second interim analysis in the OVAL study is expected in the third quarter of 2020. Our study is being conducted in collaboration with the GOG Foundation, Inc., a leading organization for research excellence in the field of gynecologic malignancies.

Final results from our Phase 1/2 clinical trial of VB-111 for recurrent platinum-resistant ovarian cancer were reported in June 2019. Data demonstrated a median overall survival (OS) of 498 days in the VB-111 therapeutic-dose arm, versus 172.5 days in the low-dose arm ( $p=0.03$ ). 58% of evaluable patients treated with the therapeutic dose of VB-111 had a GCIG CA-125 response. VB-111 activity signals were seen despite unfavorable prognostic characteristics (50% platinum refractory disease and 50% previous treatment with anti-angiogenics). There was a trend for favorable survival in patients who had CA-125 decrease  $>50\%$  in the VB-111 therapeutic-dose arm (808 vs. 351 days;  $p=0.067$ ) implicating CA-125 as a potentially valuable biomarker for response to VB-111. Post treatment fever was also associated with a signal for improved survival (808 vs. 479 days;  $p=0.27$ ).

In a Phase 2 study for rGBM, patients who were primed with VB-111 monotherapy that was continued after progression with the addition of bevacizumab (Avastin<sup>®</sup>) showed significant survival (414 vs 223 days; HR 0.48;  $p=0.043$ ) and progression free survival (PFS) advantage (90 vs 60 days; HR 0.36;  $p=0.032$ ) compared to a cohort of patients that had limited exposure to VB-111 (Brenner *et al.*, *Neuro Oncol.* 2019). Radiographic responders to VB-111 exhibited specific imaging characteristics related to its mechanism of action. Survival advantage was also seen in comparison to historic controls, with the percentage of patients living more than one year doubling from 24% to 57%.

Our Phase 3 GLOBE study in rGBM compared upfront concomitant administration of VB-111, without priming, and bevacizumab to bevacizumab monotherapy. The study, which enrolled a total of 256 patients in the US, Canada and Israel was conducted under a special protocol assessment, or SPA, agreement with the U.S. Food and Drug Administration, or FDA, with full endorsement by the Canadian Brain Tumor Consortium (CBTC). In this modified regimen, the treatment did not improve overall survival (OS) and PFS outcomes in rGBM. Study results (Cloughesy *et al.* *Neuro Oncol.* 2019 Dec 17) attribute the contradictory outcomes between the Phase 2 and Phase 3 trials as being related to the lack of VB-111 monotherapy priming in the GLOBE study, providing clinical, mechanistic and radiographic support for this hypothesis. Notably, GLOBE data show improved outcomes associated with a post VB-111 fever reaction, similar to outcomes from previous VB-111 studies, providing support that fever is a potential biomarker for better survival with VB-111, secondary to the drug's immunologic mechanism of action. No new safety concerns associated with VB-111 have been identified in the study. We do not think that results of the GLOBE study will necessarily have implications on the prospects for VB-111 in other regimens or tumor types.

Based on the understanding that study regimen may be a key factor for VB-111 efficacy in rGBM, an IND application for an investigator-sponsored randomized controlled study of VB-111 in rGBM patients has gone into effect with the FDA. The new study, sponsored by Dana-Farber Cancer Institute in collaboration with a group of top neuro-oncology US medical centers, will investigate neo-adjuvant and adjuvant treatment with VB-111 in rGBM patients undergoing a second surgery. Launch of the study is dependent on the COVID-19 pandemic conditions.

In February 2020, we announced the launch of a Phase 2 clinical trial of VB-111 in combination with nivolumab, an anti-PD1 immune checkpoint inhibitor, in the treatment of metastatic colorectal cancer. This study is being sponsored by the U.S. National Cancer Institute under a Cooperative Research and Development Agreement or CRADA. The IND application has gone into effect with the FDA. The study, which is open label, will investigate if priming with VB-111 can drive immune cells into the tumor and turn the colorectal tumors from being immunologically "cold" to "hot." In addition to safety and tolerability, this study will evaluate efficacy endpoints including Best Overall Response, as well as immunological and histologic readouts from tumor biopsies. Enrollment into the trial is dependent on the COVID-19 pandemic conditions.

In February 2017, we reported full data from our exploratory Phase 2 study of VB-111 in recurrent, iodine-resistant differentiated thyroid cancer. The primary endpoint of the trial, defined as 6-month progression-free-survival (PFS-6) of 25%, was met with a dose response. Forty-seven percent of patients in the therapeutic-dose cohort reached PFS-6, versus 25% in the sub-therapeutic cohort, both groups meeting the primary endpoint. An overall survival benefit was seen, with a tail of more than 40% at 3.7 years for the therapeutic-dose cohort. Most patients in the VB-111 study had tumors that previously had progressed on pazopanib (Votrient®) or other kinase inhibitors.

We are also conducting two parallel drug development programs that are exploring the potential of MOSPD2, a protein which we identified as a key regulator of cell motility, as a therapeutic target for inflammatory diseases and cancer.

For oncology applications, we are developing bi-specific antibodies aimed to kill tumor cells, based on MOSPD2 as a target whose expression is induced in multiple tumors. We found that MOSPD2 was detected in the majority of cancerous organs, including colon, esophagus, liver and breast. In a manuscript published in the *International Journal of Cancer* as well as in scientific conferences, we showed that MOSPD2 is required for the migration and invasion of breast cancer cells *in vitro*, and that it promotes breast cancer cell metastasis *in vivo*. Given the specificity of MOSPD2 expression and its highly elevated expression in tumors, we believe MOSPD2 can serve as a novel mechanism for targeting of tumor cells. Based on these findings, our approach is to utilize MOSPD2 as a target for attacking the tumor cells in the treatment of late-stage breast cancer and other tumor types. To this end, we are developing bi-specific antibodies that aim to induce killing of MOSPD2-positive tumor cells through binding and activation of T-cells. We have presented proof-of-concept for this approach at the AACR conference in April 2018 using a BiTE antibody. New data from this program were accepted for presentation at the 2020 American Association of Cancer Research (AACR) virtual annual meeting II, which is expected in June 2020.

For inflammatory applications, we are developing classical antibodies that bind and block MOSPD2 on immune cells. Our data show that MOSPD2, which is predominantly expressed on the surface of human monocytes, is essential for their migration. By inhibiting this protein, we seek to block this migration of monocytes to sites of inflammation, and accordingly to reduce inflammation and tissue damage. At the ECTRIMS 2018 meeting, we presented the critical role of MOSPD2 in the development of multiple sclerosis, and its potential as a novel target for treatment of inflammation in the Central Nervous System (CNS) and other organs. Using MOSPD2 knockout mice, our data show that MOSPD2 was critical for the development of the disease in the experimental autoimmune encephalomyelitis (EAE) model for Multiple Sclerosis (MS), as knockout mice essentially do not develop the disease. Furthermore, we developed proprietary monoclonal antibodies against MOSPD2 that successfully prevented development of EAE, and were also effective in treatment of the animals after the neurological symptoms had already appeared. These data suggest that MOSPD2 is a critical path in MS, as we published in a peer-review manuscript in 2020. In February 2019, we presented additional data implicating the potential of our VB-600 platform of antibodies targeting MOSPD2 for treatment of Nonalcoholic Steatohepatitis (NASH) and Rheumatoid Arthritis (RA). In May 2020, we presented data at the Digestive Disease Week® (DDW) 2020 virtual meeting, demonstrating that treatment with anti-MOSPD2 antibody profoundly decreased inflammation and fibrosis in a NASH model and significantly reduced the disease activity in a colitis model. Collectively, these data point to MOSPD2 as a key pathway through which the body is recruiting monocytes to specific sites of inflammation. We believe that antibodies targeting MOSPD2 have potential for treatment of various inflammatory indications, and are advancing lead candidates towards a first-in-human study, which is expected in 2021.

We also have been conducting a program targeting anti-inflammatory diseases, based on the use of our Lecinoxoid platform technology. Lecinoxoids are a novel class of small molecules we developed that are structurally and functionally similar to naturally occurring molecules known to modulate inflammation. The lead product candidate from this program, VB-201, is a Phase 2-ready molecule that demonstrated activity in reducing vascular inflammation in a Phase 2 sub-study in psoriatic patients with cardiovascular risk. Based on recent pre-clinical studies, we believe that VB-201 and some second generation molecules such as VB-703 may have potential applicability for NASH and renal fibrosis. In March 2019, we announced a strategic exclusive option license agreement with one of the world-leading European animal health companies for the development of VB-201 for veterinary use. We retain the VB-201 rights for treatment of humans, worldwide.

In October 2017, we announced the opening of our new gene therapy manufacturing plant in Modiin, Israel. This plant can be the commercial facility for production of VB-111, if approved. The Modiin facility is the first commercial-scale gene therapy manufacturing facility in Israel and currently one of the largest gene-therapy designated manufacturing facilities in the world (20,000 sq. ft.). In July 2019, the facility was certified by a European Union (EU) Qualified Person (QP) as being in compliance with EU Good Manufacturing Practices (GMP).

In November 2017, we signed an exclusive license agreement with NanoCarrier Co., Ltd. (TSE Mothers:4571) for the development, commercialization and supply of VB-111 in Japan. We retain rights to VB-111 in the rest of the world. Under terms of the agreement, we have granted NanoCarrier an exclusive license to develop and commercialize VB-111 in Japan for all indications. We will supply NanoCarrier with VB-111, and NanoCarrier will be responsible for all regulatory and other clinical activities necessary for commercialization in Japan. In exchange, we received an up-front payment of \$15 million, and are entitled to receive greater than \$100 million in development and commercial milestone payments if certain development and commercial milestones are achieved. We will also receive tiered royalties on net sales in the high-teens.

In March 2019, we executed an exclusive option license agreement with an animal health company for the development of our proprietary anti-inflammatory molecule, VB-201, for veterinary use. We retain VB-201 rights for treatment of humans worldwide. Under the terms of the agreement, we have granted an exclusive option license to explore the potential of VB-201 for animal health indications. In consideration, we received an undisclosed up-front payment, and are entitled to receive additional development milestone payments. In April 2020, another milestone event under this agreement was reached, following which we received an undisclosed payment. Upon exercising the option to license, we will receive additional milestones and royalties on net sales.

### **The Impact of COVID-19 on Business Operations and Clinical Trials**

The Company has implemented safety measures designed to comply with applicable guidelines in Israel in response to the COVID-19 pandemic. Our key operations were uninterrupted by this pandemic. Except for a period of a few weeks in March-April 2020 during which the Company implemented partial work-from-home policy, our operations are now back to normal along with the major improvement of the pandemic in Israel. According to Israeli regulations, VBL, as a pharmaceutical company producing potential therapies for cancer patients, is considered as essential facility and is therefore exempt from many labor work restrictions even under emergency conditions such as the COVID-19 pandemic. Accordingly, our gene therapy pharmaceutical grade manufacturing plant in Modiin, Israel continues to operate as normal. At this time, all preclinical programs and research activities remain on track, and the Company does not anticipate any material impact on our regulatory activities.

With regards to clinical trials, the Company continues to advance the ongoing OVAL study of VB-111 for platinum resistant ovarian cancer and the study is continuing to recruit patients in the U.S. and Israel. Despite the COVID-19 pandemic, patient enrollment had not been materially interrupted and is so far in line with our projections. As the trial population includes cancer patients with advanced disease and limited alternatives, we believe it is less susceptible to impact by COVID-19 compared to other non-life-threatening indications. We continue to advance our plans to extend the OVAL study to Europe and Japan, and do not expect any material changes to the projected study timeline. The second interim analysis in the OVAL study is expected in the third quarter of 2020. Opening of new centers in the VB-111 investigator-sponsored study in rGBM, and the NCI-sponsored study in metastatic colorectal cancer currently awaits further developments in management of the COVID-19 situation.

We commenced operations in 2000, and our operations to date have been limited to organizing and staffing our company, business planning, raising capital, developing our VTS and Lecinoxoid platform technologies and developing our product candidates, including conducting pre-clinical studies and clinical trials of VB-111 and VB-201. To date, we have funded our operations through private sales of preferred shares, a convertible loan, public offering and grants from the Israeli Office of Chief Scientist, or OCS, which has later transformed to the Israeli Innovation Authority, or IIA, under the Israel Encouragement of Research and Development in Industry, or the Research Law. We have no products that have received regulatory approval and accordingly have never generated regular revenue streams. Since our inception and through March 31, 2020, we had raised an aggregate of \$255.2 million to fund our operations, of which \$113.4 million was from sales of our equity securities, \$40.5 from our initial public offering, or IPO, \$15 million from a November 3, 2015 underwritten offering, approximately \$24.0 million from a June 7, 2016 registered direct offering, \$17.9 million from a November 16, 2017 underwritten offering, \$15.5 million from a June 27, 2018 registered direct offering, \$26.9 million from IIA grants and \$2.0 million from at-the-market equity facility.

Since inception, we have incurred significant losses. Our loss for the Period was \$5.4 million. For the years ended December 31, 2019 and 2018, our loss was \$19.5 million and \$20.4 million, respectively. We expect to continue to incur significant expenses and losses for at least the next several years. As of March 2020, we had an accumulated deficit of \$213.5 million. Our losses may fluctuate significantly from quarter to quarter and year to year, depending on the timing of our clinical trials, the receipt of payments under any future collaborations we may enter into, and our expenditures on other research and development activities.

As of March 31, 2020, we had cash and cash equivalents, short-term bank deposits and restricted bank deposits of \$31.6 million. On May 7, 2020 and on May 11, 2020, we entered into definitive agreements with several institutional investors and existing shareholders for the purchase and sale of 11,492,065 ordinary shares of the Company, at a purchase price of \$1.575 per share, the net proceeds from which were approximately \$16.7 million after deducting the placement agent fees and commissions and offering expenses payable by the Company. To fund further operations, we will need to raise additional capital. We may seek to raise more capital to pursue additional activities, which may be through a combination of private and public equity offerings, government grants, strategic collaborations and licensing arrangements. Additional financing may not be available when we specifically need it or may not be available on terms that are favorable to us. As of March 31, 2020, we had 38 employees. Our operations are located in a single facility in Modiin, Israel.

Various statements in this release concerning our future expectations constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. These statements include words such as “may,” “expects,” “anticipates,” “believes,” and “intends,” and describe opinions about future events. These forward-looking statements involve known and unknown risks and uncertainties that may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Some of these risks are incurred losses; dependence on the success of our lead product candidate, VB-111, its clinical development, regulatory approval and commercialization; the novelty of our technologies, which makes it difficult to predict the time and cost of product candidate development and potential regulatory approval; as well as potential delays in our clinical trials.

These and other factors are more fully discussed in the “Risk Factors” section of our Annual Report on Form 20-F for the year ended December 31, 2019. In addition, any forward-looking statements represent our views only as of the date of this release and should not be relied upon as representing our views as of any subsequent date. We do not assume any obligation to update any forward-looking statements unless required by law.

## **Financial Overview**

### **Revenue**

As of March 31, 2020, we have generated cumulative revenues of approximately \$15.4 million under an exclusive license agreement for the development, commercialization, and supply of VB-111 in Japan for all indications and an option to license agreement for the development of VB-201 for animal healthcare worldwide. The generated revenues comprises upfront and milestone payments.

The cost of revenues associated with these revenues were approximately \$0.8 million.

We do not expect to receive any other revenue from any product candidates that we develop unless and until we obtain regulatory approval and commercialize our products or enter into collaborative agreements with third parties.

### **Research and Development Expenses**

Research and development expenses consist of costs incurred for the development of both of our platform technologies and our product candidates. Those expenses include:

- employee-related expenses, including salaries and share-based compensation expenses for employees in research and development functions;
- expenses incurred in operating our laboratories and small-scale manufacturing facility;
- expenses incurred under agreements with CROs and investigative sites that conduct our clinical trials;
- expenses relating to outsourced and contracted services, such as external laboratories, consulting and advisory services;
- supply, development and manufacturing costs relating to clinical trial materials;
- maintenance of facilities, depreciation and other expenses, which include direct and allocated expenses for rent and insurance; and
- costs associated with pre-clinical and clinical activities.

Research expenses are recognized as incurred. An intangible asset arising from the development of our product candidates is recognized if certain capitalization conditions are met. As of March 31, 2020, we did not have any capitalized development costs.

Costs for certain development activities are recognized based on an evaluation of the progress to completion of specific tasks using information and data provided to us by our vendors and clinical sites. Nonrefundable advance payments for goods or services to be received in future periods for use in research and development activities are deferred and capitalized. The capitalized amounts are then expensed as the related goods are delivered and the services are performed.

We have received grants from the IIA as part of the research and development programs for our VTS and Lecinoxoid platform technologies. The requirements and restrictions for such grants are found in the Research Law. These grants are subject to repayment through future royalty payments on any products resulting from these research and development programs, including VB-111 and VB-201. The cumulative total gross amount of grants actually received by us from the IIA, including accrued LIBOR interest as of March 31, 2020 totaled \$33.5 million.

Information on our liabilities and the restrictions that we are subject to under the Research Law in connection with the IIA grants that we have received is detailed in the Annual Report on Form 20-F as of and for the year ended December 31, 2019.

Under applicable accounting rules, the grants from the IIA have been accounted for as an off-set against the related research and development expenses in our financial statements. As a result, our research and development expenses are shown on our financial statements net of the IIA grants.

### **General and Administrative Expenses**

General and administrative expenses consist principally of salaries and related costs for personnel in executive and finance functions such as salaries, benefits and share-based compensation. Other general and administrative expenses include facility costs not otherwise included in research and development expenses, communication expenses, and professional fees for legal services, patent counseling and portfolio maintenance, consulting, auditing and accounting services.

### **Financial Expenses (Income), Net**

Financial income is comprised of interest income generated from interest earned on our cash, cash equivalents and short-term bank deposits and gains and losses due to fluctuations in foreign currency exchange rates, mainly in the appreciation and depreciation of the NIS exchange rate against the U.S. dollar.

Financial expenses primarily consist of calculated interest expenses from our lease liabilities and gains and losses due to fluctuations in foreign currency exchange rates.

### **Taxes on Income**

We have not generated taxable income since our inception, and had carry forward tax losses as of December 31, 2019 of \$181.1 million. We anticipate that we will be able to carry forward these tax losses indefinitely to future tax years. Accordingly, we do not expect to pay taxes in Israel until we have taxable income after the full utilization of our carry forward tax losses.

We recognize deferred tax assets on losses for tax purposes carried forward to subsequent years if utilization of the related tax benefit against a future taxable income is expected. We have not created deferred taxes on our tax loss carry forward since their utilization is not expected in the foreseeable future.

### **Critical Accounting Policies and Significant Judgments and Estimates**

This management's discussion and analysis of our financial condition and results of operations is based on our financial statements, which have been prepared in accordance with IFRS. The preparation of these financial statements requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements, as well as the reported expenses incurred during the reporting periods. Estimates and judgments are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

We make estimates and assumptions concerning the future. The resulting accounting estimates will, by definition, seldom equal the related actual results. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below.

### **Revenue**

With respect to the License Agreement, the Company used its judgement in the following main issues:

Identifying the performance obligations in the agreement and determining whether the license provided is distinct - based on the Company's analysis, the license is distinct as the licensee is able to benefit from the license on its own at its current stage (inter alia, due to sublicensing rights, rights and responsibility for development in the territory, etc.).

Allocation of the transaction price - the Company estimated the standalone selling prices of the services to be provided based on expected cost plus a margin and used the residual approach to estimate the standalone selling price of the license as the Company has not yet established a price for the license, and it has not previously been sold on a standalone basis.

Variable consideration consists of potential future milestone payments. The Company determined that all such variable consideration shall be allocated to the license (the satisfied performance obligation).

## Share-Based Compensation

With respect to grants to employees, the value of the labor services received from them in return is measured on the date of grant based on the fair value of the equity instruments granted to the employees.

The Company's management estimates the fair value of the options granted to consultants based on the value of services receivable over the vesting period of the applicable options.

The value of the transactions, measured as aforesaid, is expensed over the period during which the right of the employees and non-employees to exercise or receive the underlying equity instruments vests; commensurate with every periodic recognition of the expense, a corresponding increase is recorded to additional paid in capital, included under the Company's equity.

## Clinical trial accruals

Clinical trial expenses are charged to research and development expense as incurred. We accrue for expenses resulting from obligations under contracts with clinical research organizations (CROs). The financial terms of these contracts are subject to negotiations, which vary from contract to contract and may result in payment flows that do not match the periods over which materials or services are provided. Our objective is to reflect the appropriate trial expense in the financial statements by matching the appropriate expenses with the period in which services and efforts are expended. As of March 31, 2020, we had clinical accruals in the amount of approximately \$2.3 million.

## Lease

In determining the lease term, we consider all facts and circumstances that create an economic incentive to exercise an extension option, or not exercise a termination option. Extension options are only included in the lease term if the lease is reasonably certain to be extended. At initial recognition of lease liability, we used incremental borrowing rate, which is the rate that the lessee would have to pay to borrow the funds necessary to obtain an asset of similar value in a similar economic environment with similar terms and conditions.

## Results of Operations

### Comparison of three month periods ended March 31, 2020 and 2019:

	Three Months Ended		Increase (decrease)	
	March 31,			
	2020	2019	\$	%
	(in thousands) (unaudited)			
Revenues	\$ 366	\$ 219	147	67%
Cost of revenues	(53)	(38)	(15)	39%
Gross profit	313	181	132	73%
Expenses:				
Research and development, gross	4,894	3,838	\$ 1,056	28%
Government grants	(143)	(530)	387	(73)%
Research and development, net	4,751	3,308	1,443	44%
General and administrative	1,168	1,256	(88)	(7)%
Operating loss	5,606	4,383	1,223	28%
Financial income, net	(253)	(201)	(52)	26%
Loss	\$ 5,353	\$ 4,182	\$ 1,171	28%

*Revenues.*

Revenues for the period ended March 31, 2020 were \$366 thousand, compared to \$219 thousand for the Parallel Period in 2019, an increase of 67%.

The Cost of revenues for the period ended March 31, 2020 were \$53 thousand, compared to \$38 thousand for the parallel period. The cost of revenues is attributed to the labor costs and other expenses related to the performance obligations that were delivered during the period.

*Research and development expenses, net.*

Research and development expenses are shown net of IIA grants. Research and development expenses, net were approximately \$4.8 million for the Period, compared to approximately \$3.3 million in the Parallel Period, an increase of approximately \$1.4 million or 44%. The increase in research and development expenses, net, in the Period was mainly related to the increase in the OVAL study activity and MOSPD2 activity for approximately \$1.2 million and a decrease in the IIA grant of \$0.4 million.

*General and administrative expenses.*

General and administrative expenses for the Period were \$1.2 million, compared to \$1.3 million for the Parallel Period, a decrease of \$0.1 million or 7%. This decrease is mainly attributed to payroll related costs for management and directors share-based compensation expense.

*Financial expenses (income), net.*

Financial income, net for the Period were approximately \$253 thousand, compared to approximately \$201 thousand for the Parallel Period, an increase of \$52 thousand or 26%. The increase was primarily attributable to favorable exchange rates offset by interest income on short-term deposits.

## Liquidity and Capital Resources

Since inception, we have incurred significant losses. Our loss for the period was \$5.4 million. For the years ended December 31, 2019 and 2018, our loss was \$19.5 million and \$20.4 million, respectively. We expect to continue to incur significant expenses and losses for at least the next several years. As of March 31, 2020, we had an accumulated deficit of \$213.5 million. Our losses may fluctuate significantly from quarter to quarter and year to year, depending on the timing of our clinical trials, the receipt of payments under any future collaborations we may enter into, and our expenditures on other research and development activities.

## Funding Requirements

At March 31, 2020, we had cash, cash equivalents, short-term bank deposits and restricted bank deposit totaling \$31.6 million and working capital of \$24.6 million. VBL expects that its cash and cash equivalents and short-term bank deposits, with the addition of approximately \$16.7 million from the net proceeds of the Registered Direct Offerings, which we have entered into on May 7, 2020 and on May 11, 2020, will be sufficient to fund operating expenses and capital expenditure requirements into the third quarter of 2022. We are unable to estimate the amounts of increased capital outlays and operating expenses associated with completing the development of VB-111 and our other product candidates. Our future capital requirements will depend on many factors, including:

- the costs, timing and outcome of regulatory review of VB-111 and any other product candidates we may pursue;
- the costs of future development activities, including clinical trials, for VB-111 and any other product candidates we may pursue;
- the costs of preparing, filing and prosecuting patent applications, maintaining and enforcing our intellectual property rights and defending intellectual property-related claims;
- the extent to which we acquire or in-license other products and technologies; and
- our ability to establish any future collaboration arrangements on favorable terms, if at all.

Until such time, if ever, as we can generate substantial product revenue, we expect to finance our cash needs through a combination of equity offerings, debt financings, collaborations, strategic alliances and licensing arrangements. We do not have any committed external source of funds.

## Cash Flows

The following table sets forth the primary sources and uses of cash for each of the periods set forth below:

	Period ended March 31,	
	2020	2019
	(in thousands) (unaudited)	
Cash used in operating activities	\$ (5,837)	\$ (2,949)
Cash provided by (used in) investing activities	8,989	(18,039)
Cash provided by (used in) financing activities	252	(177)
Net increase (decrease) in cash and cash equivalents	<u>\$ 3,404</u>	<u>\$ (21,165)</u>

## **Operating Activities**

Cash used in operating activities for the Period was \$5.8 million and consisted primarily of net loss of \$5.4 million arising primarily from research and development activities and a net increase in working capital of \$1.1 million, partially offset by a net aggregate non-cash charges of \$0.6 million.

Cash used in operating activities for the Parallel Period was \$2.9 million and consisted primarily of net loss of \$4.2 million arising primarily from research and development activities, partially offset by a net reduction in working capital of \$0.3 million and net aggregate non-cash charges of \$0.9 million.

## **Investing Activities**

Net cash provided by investing activities was \$9.0 million for the Period. This was primarily due to maturation of short-term bank deposits of \$13.0 million, offset by the investment of short-term bank deposits of \$4.0 million.

Net cash used in investing activities for the Parallel Period was \$18.0 million. This was primarily due to investment in short-term bank deposits and the purchases of property and equipment.

## **Financing Activities**

Net cash provided by financing activities was \$252 thousand for the Period compared to net cash used in financing activities of \$177 thousand for the Parallel Period. The decrease in the amount of \$0.4 thousand was mainly due to the issuance of ordinary shares in the Period.

## **Contractual Obligations and Commitments**

During the three months ended March 31, 2020, there have been no material changes to our contractual obligations and commitments outside the ordinary course of business.

## **Off-Balance Sheet Arrangements**

Since our inception, we have not engaged in any off-balance sheet arrangements, as defined in the rules and regulations of the SEC, such as relationships with unconsolidated entities or financial partnerships, which are often referred to as structured finance or special purpose entities, established for the purpose of facilitating financing transactions that are not required to be reflected on our statement of financial positions.

## **Quantitative and Qualitative Disclosures about Market Risk**

We are exposed to market risks in the ordinary course of our business. Market risk represents the risk of loss that may impact our financial position due to adverse changes in financial market prices and rates. Our market risk exposure is primarily a result of foreign currency exchange rates. Approximately 30% of our expenses in the three months ended March 31, 2020 were denominated in New Israeli Shekels. Changes of 5% in the US\$/NIS exchange rate will increase or decrease the operation expenses by up to 1%.

## **Foreign Currency Exchange Risk**

Fluctuations in exchange rates, especially the NIS against the U.S. dollar, may affect our results, as some of our assets are linked to NIS, as are some of our liabilities. In addition, the fluctuation in the NIS exchange rate against the U.S. dollar may impact our results, as a portion of our operating cost is NIS denominated.

## **Inflation Risk**

We do not believe that inflation had a material effect on our business, financial condition or results of operations in the last two fiscal years. If our costs were to become subject to significant inflationary pressures, we may not be able to fully offset such higher costs through hedging transactions. Our inability or failure to do so could harm our business, financial condition and results of operations.
